CONSTRUCTION MAINTENANCE ENGINEERING

M2P Engineering provides construction, maintenance and engineering services from mine to port. We are experts in constructing, maintaining and optimising bulk materials handling systems, as well as manufacturing inflatable industrial products.

M2P is committed to providing safe, efficient and cost-effective solutions to our clients. We are adaptable in our approach whilst maintaining our focus on quality.

At M2P, safety is imperative to every aspect of our business. Our system certifications include ISO9001, ISO14001 and ISO45001, which enables us to adapt management plans in consultation with clients.

SCI QUAL
INTERNATIONAL

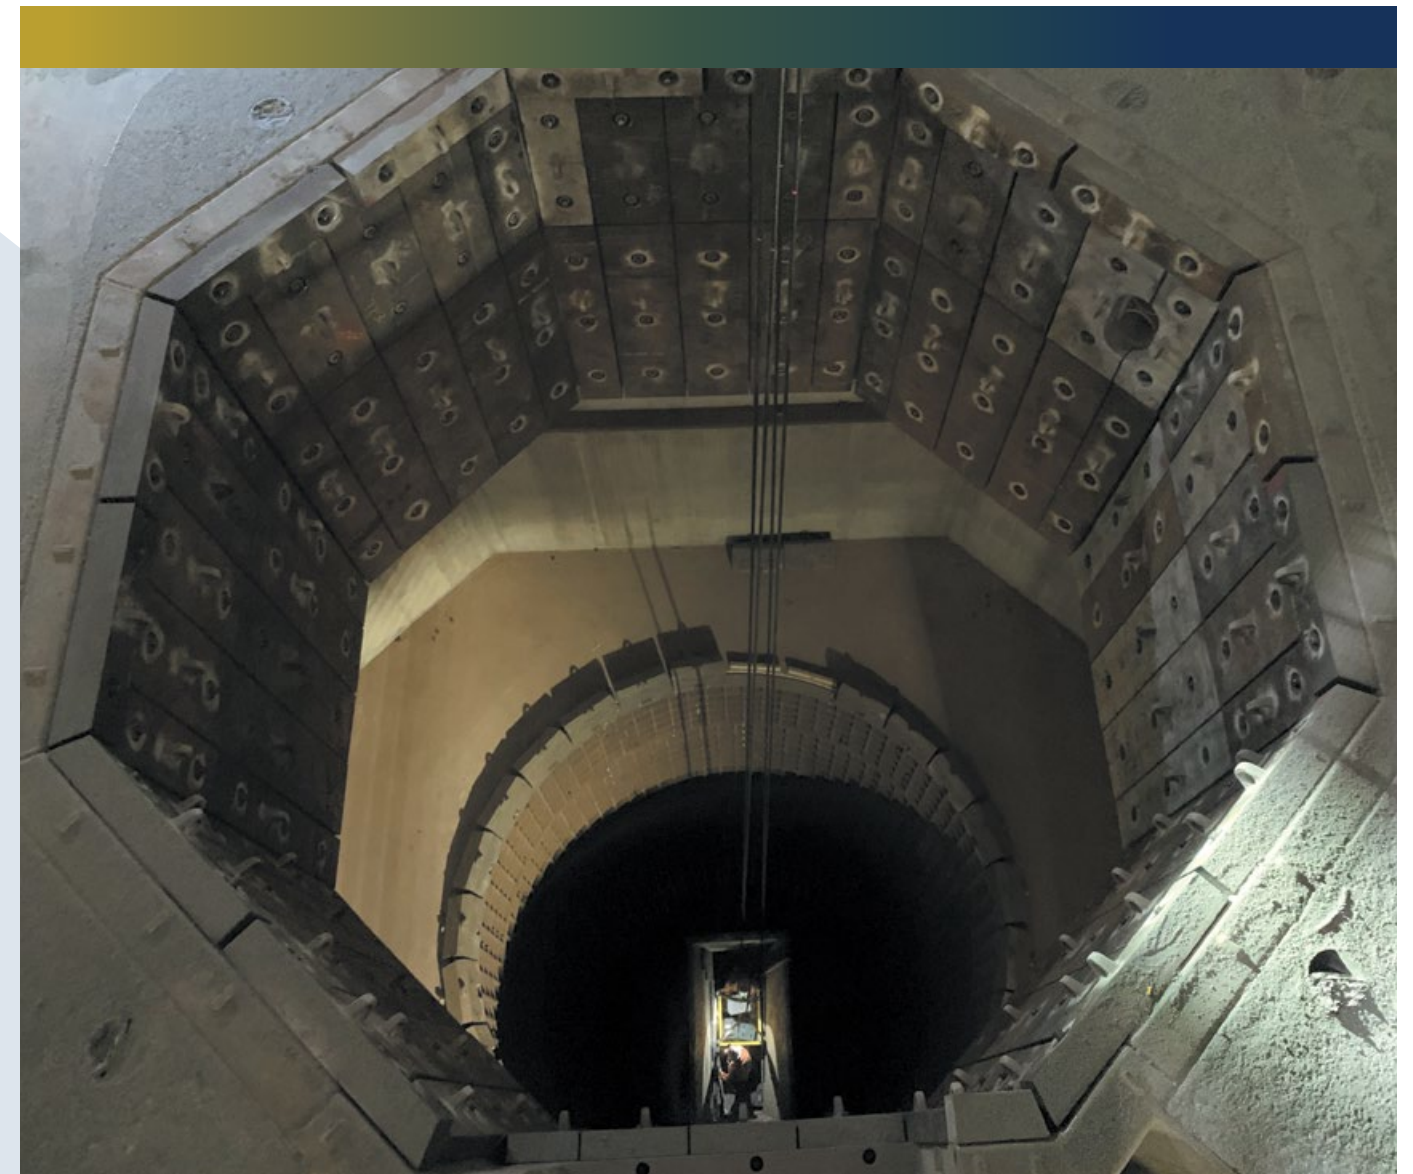

PROJECTS

The M2P Projects team have extensive design and construction experience in pit and underground mining.

We offer project capabilities across all SMP infrastructure requirements, and operate our own fleet of underground-capable construction plant equipment.

Completed above and below surface works to date include:

- Ventilation systems
- Water storage systems
- Mine services
- Concrete batching plants
- Crushing and material handling systems
- Mechanical and maintenance services.

MAINTENANCE

M2P retains a team of specially qualified tradespeople who are experienced working with industrial maintenance and bulk materials handling systems from the mining sector through to the shipping sector. Our port-ready personnel are Maritime Security Identification Card holders and we have special class welders with Lloyds Register certification.

Our maintenance services team is available to provide:

- Mechanical maintenance
- Component refurbishment
- Steel manufacturing and fabrication
- Chute maintenance and fabrication
- Mechanical machining and assembly
- Technical engineering design and drafting.

MINVENT

M2P's inflatable Minvent products save time and money, whilst improving safety on site.

M2P manufactures customisable inflatable products for a wide range of industry applications, which are designed to operate at various temperatures and pressures to suit our clients' needs.

Minvent products are reusable and efficient alternatives for existing rigid systems such as scaffolding, walls and doors.

These can be utilised for:

- Overhead and underfoot protection
- Ventilation control
- Emergency and routine seals
- Isolation barriers
- Formwork
- Plugs
- Environmental shelters
- Crusher pockets protection
- R&D projects.
