

Providing
SAFE & EFFICIENT
Engineering Solutions

CONSTRUCTION MAINTENANCE ENGINEERING

M2P Engineering is a leading Engineering, Construction & Maintenance group providing services to the Minerals & Mining, Marine & Water Infrastructure sectors throughout Australia with branches located in Brisbane QLD and in Orange NSW.

M2P Engineering build, maintain and improve customer operations through our safe, reliable, innovative and cost effective project solutions. M2P Engineering aim to be a recognised leader in these market sectors and are a great company to work for, work with and invest in for all Engineering, Construction & Maintenance works

At M2P Engineering, safety is a value to every aspect of our business and our employees. Our HES Management system is certified to ISO14001 and ISO45001, which enables us to adapt to most situations that arise in-house or with our clients.

SCI QUAL
INTERNATIONAL

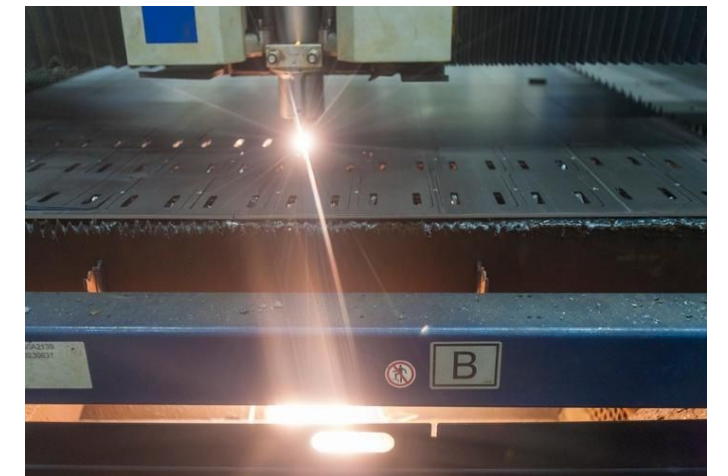

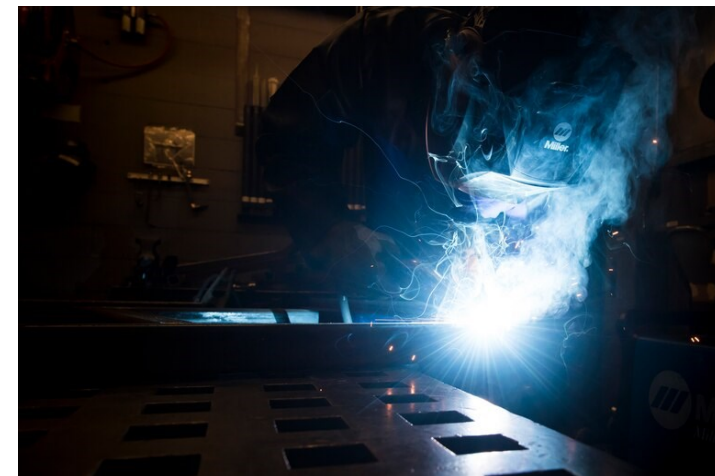

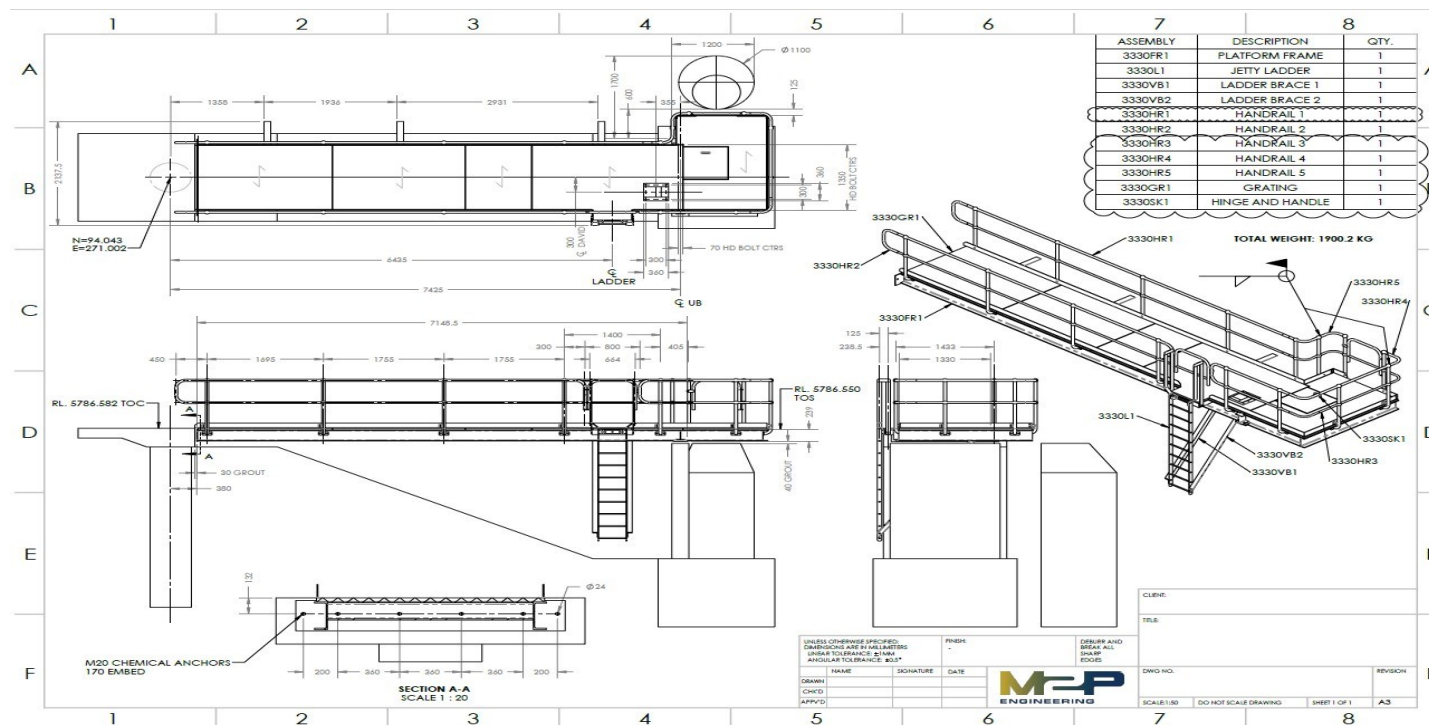

ENGINEERING

M2P Engineering is an industry leader within the engineering field leveraging from their in house design / drafting capabilities and decades of industry knowledge that we share and work with our clients to construct and deliver projects with a quality finish.

Our team has extensive knowledge in project work such as:

- Underground Primary Crushing & Ore Handling Systems
- Primary Ventilations Systems
- Marine
- Ship Modifications, Maintenance &
- Bulk Materials Handling
- Quarry Processing Plants
- Water Treatment Facilities
- Concrete Batching Plants

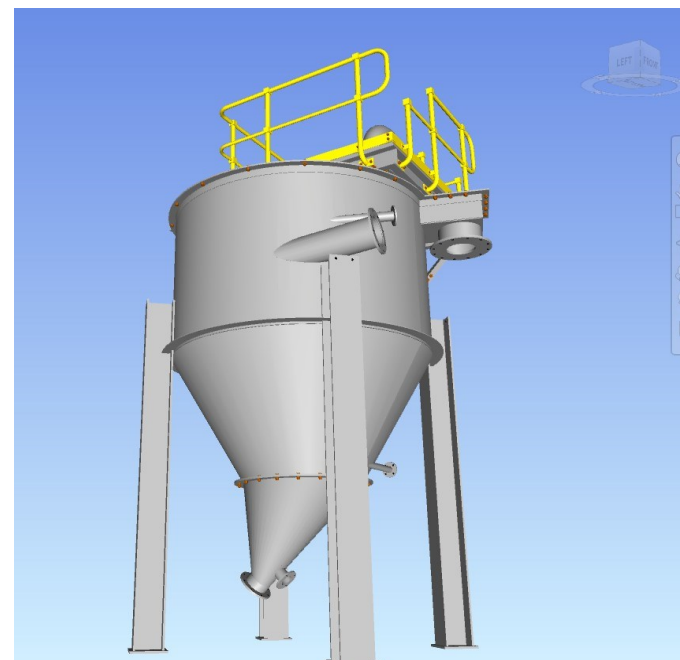

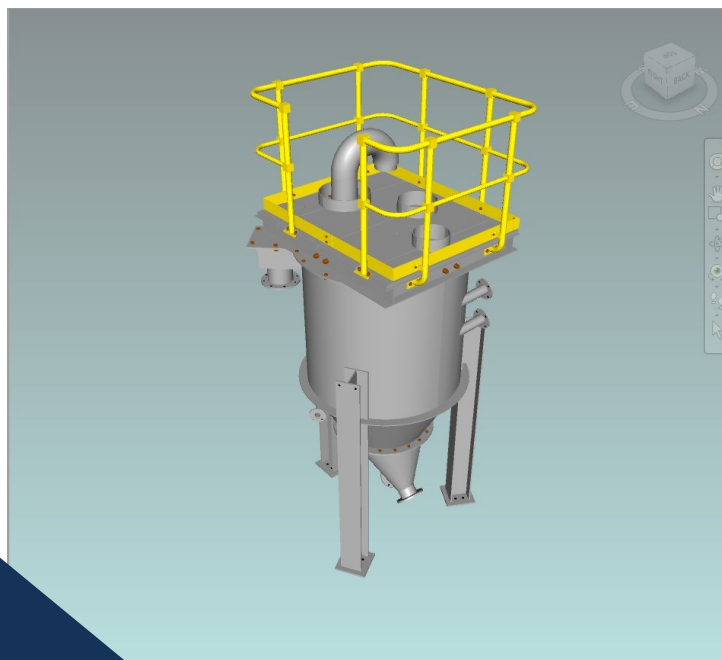

FABRICATION

Our experienced team of fabricators, boilermakers and welders have an extensive range of experience in various industries offering our clients a broad range of solutions. M2P Engineering have two workshops situated in Brisbane QLD and Orange NSW.

Our workshop facilities are capable of executing small to large scale packages and include state of the art fabrication equipment and specialize in materials such as; carbon steel, stainless steel and some exotics.

Below are areas we predominantly focus with our fabrication:

- Pipework (Class 1 - 3)
- Plate work (Chutes, Bins, Tanks, Hoppers etc)
- Structural steel (Welded platforms, structures etc)

PROJECTS

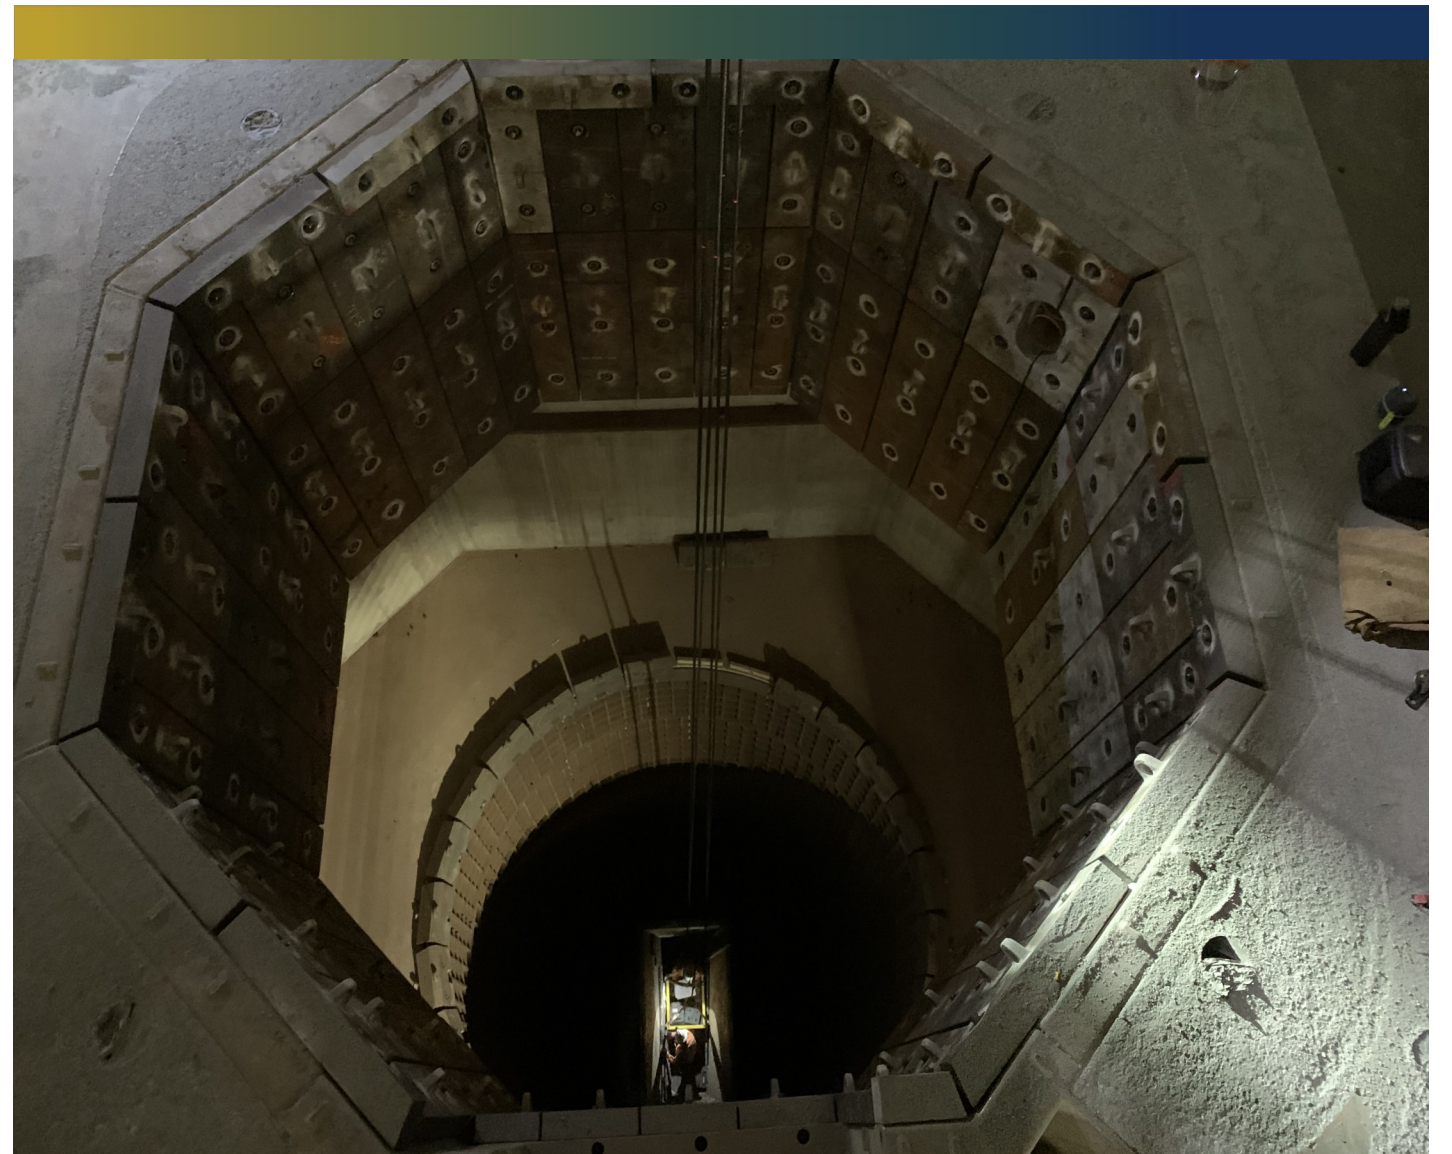

M2P Engineerings projects division has extensive design and construction experience within the Minerals & Mining, Marine & Water Infrastructure sectors

We have a strong and reputable position within the industry for the execution of projects on schedule, within budget & delivering a quality finished product to our clients.

We own a large selection of capable construction plant and equipment that assists us in delivering these projects.

Completed projects to date include scopes such as:

- Underground Material handling & Ventilation Systems
- Water Treatment & Storage systems
- Concrete Batching Plants & Quarries
- Crushing and Material handling systems
- Marine

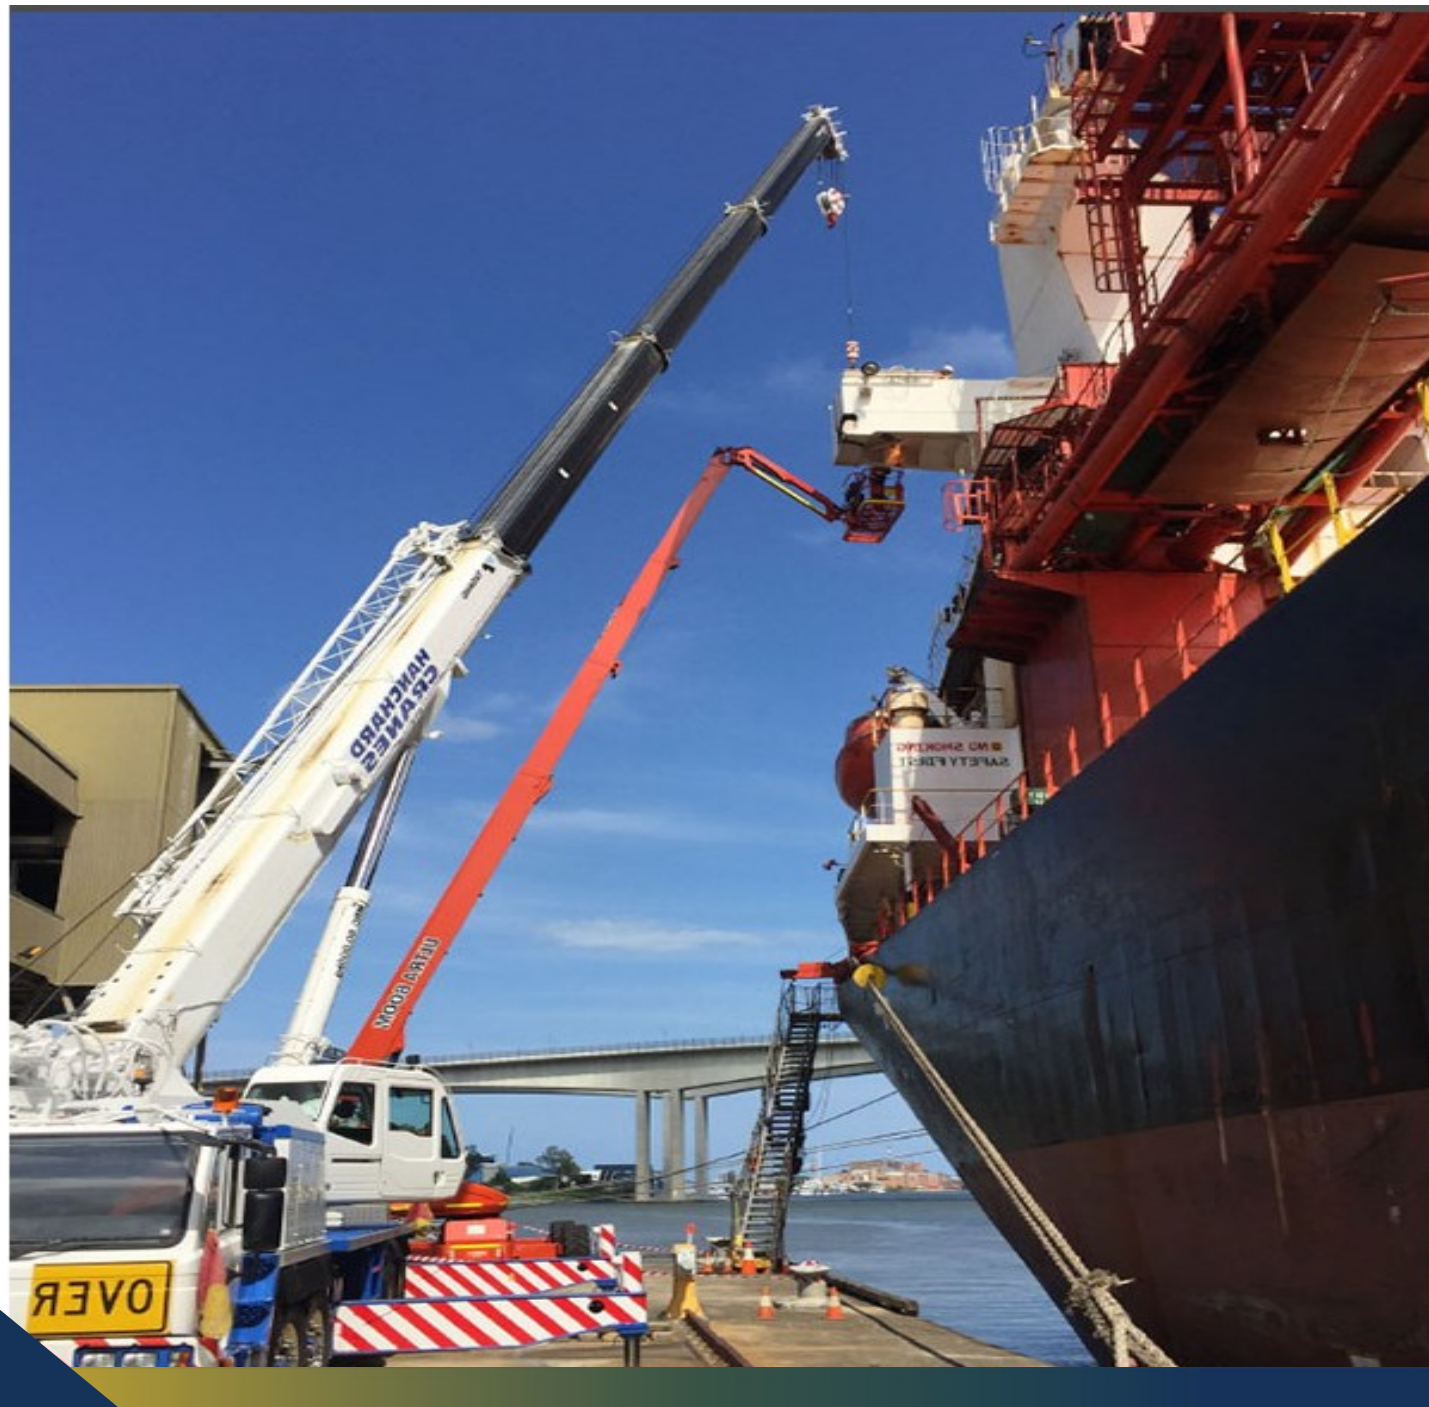

MAINTENANCE

Our maintenance services division provides field maintenance, shutdowns and capital project services within the Minerals & Mining, Marine & Materials Handling sectors. Our multidisciplinary team is heavily experienced in the delivery of all management, support, labour, and plant and equipment required for any maintenance, shutdowns, and sustaining capital projects.

Our maintenance services include:

- Preventative maintenance
- Field maintenance
- Small - medium sized shutdowns
- Component refurbishment
- Mechanical machining and assembly

MINVENT

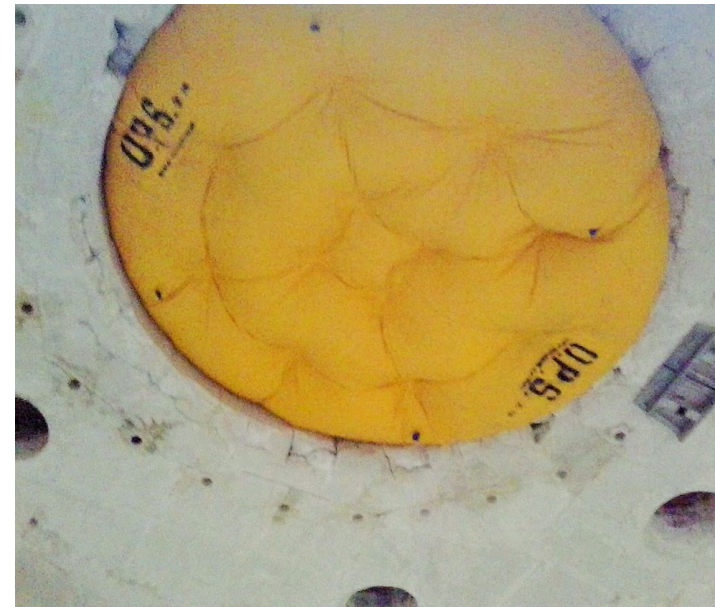

M2P Engineering's inflatable Minvent products save time and money, whilst improving safety on site.

M2P Engineering manufactures Australian made customisable inflatable products for a wide range of industry applications, which are designed to operate at various temperatures and pressures to suit our clients' needs.

Minvent products are reusable and efficient alternatives for existing rigid systems such as scaffolding, walls and doors.

These can be utilised for:

- Overhead and underfoot protection
- Ventilation control
- Emergency and routine seals
- Isolation barriers
- Formwork
- Plugs
- Environmental shelters
- Crusher pockets protection
